ABSTRACT

This descriptive map list has been compiled as a finding aid for historians, geographers, teachers, librarians, students, and others who have need for maps of America during the Revolutionary War period. The map descriptions are arranged in seven geographical sections: North America, Canada, New England, Middle Atlantic Region, West Point and vicinity, South Atlantic Region, and the Appalachians. Each description includes the following information: (1) title; (2) bibliographic data; (3) size; (4) scale; (5) present geographical identification; and (6) brief description of the geographical and cultural features. All maps are in the United States Military Academy Library Map Collection. (Author/JAB)

FOREWORD

Researchers in Colonial America often attest to the indispensable value of contemporary maps in tracing the movement of European civilization into the new continent. Researchers in military history attest similarly that maps contribute importantly to the understanding not only of terrain and troop movements, but of the tactics and strategy of a distant era. It is regrettable, then, that maps are often the last of a long list of important projects of the cataloguer and the bibliographer. The sturdy sourcebook that the map provides often remains untapped.

Researchers at West Point -- officers, cadets, and visiting scholars -- are fortunate that the Academy's excellent collection of maps has been exposed to the sensitive treatment of Mrs. Marie T. Capps and Major Theodore G. Stroup, Jr. We historians are indebted to these passionate compilers, and to Mr. Egon A. Weiss, the Academy Librarian, who sustained them in this effort. Their work shall be rewarded through us.

INTRODUCTION

This descriptive map list has been compiled as a finding aid for historians, geographers, teachers, librarians, students, and others who have need for maps of America during the Revolutionary War period. All maps are in the United States Military Academy Library Map Collection.

A work of this kind must of necessity have limitations; therefore, the selection of maps was based on the following criteria: (1) maps published before the Revolutionary War having usable data for the American or British forces; (2) maps of the new American republic before 1800; (3) maps executed for immediate use during the period and conveying military information. Retrospective maps of military actions were omitted unless made immediately after the event. No attempt has been made to list maps in the contemporary books and periodicals.

Represented in the collection are the five general types of military maps mentioned by Peter Guthorn in *American Maps and Map Makers of the Revolution* (military geographical surveys, surveys of encampments and fortifications, casual offhand sketches, public information news maps and formal documentary battle maps.)

Individual maps have been arranged in geographical order and are divided into seven sections. Because of local interest, special attention (Section V) has been given to the maps of West Point, which was established as an encampment in 1778 and played a major role in the fortification of the Hudson River. Section VIII contains a listing of the contents of the atlases of the Revolutionary War Period held in the West Point collection. An alphabetical list of the publishers, cartographers, engravers, and others involved in the making of maps comprises the final section.

Individual map descriptions include the following information: (1) the title reproduced exactly as it appears on the map; (2) the bibliographic data, i.e., the cartographer, the publishers, place and date of publication, engraver or other special information; (3) the size given in inches, vertical and then horizontal, specifying the dimensions within borders; (4) the scale using the term of measurement converted into recognizable modern units; (5) present geographical identification of the area of the map; (6) brief description of the geographical and cultural features; with a note on the map's referencing of longitude.

Of interest to the map researcher is the varied referencing of longitude. In this period Greenwich had not been universally established as the prime meridian. It was frequently the practice to use the capital city of the nation of the nation of the cartographer or his patron as the prime meridian. Places of 0° Longitude referenced on the listed maps are: London, Paris, Philadelphia, New York, Ferro, an island in the Canary Islands, and Carratuck Inlet, a bay off the coast of Virginia and North Carolina.

All the maps included are copper engraving unless otherwise stated. Where the map is a facsimile, it is specified as such and the repository for the original is identified.

Included in the map collection are four outstanding atlases of the Revolutionary War period. Each atlas map listed appears in its proper geographical section. In addition, a complete listing of the contents of the atlases is to be found in Section VIII and the individual maps are corss-referenced to the description in the main list.

An unusual collection of color facsimiles of ten maps made for Count Rochambeau from a manuscript atlas entitled *Atlas de la Guerre de l'Amerique* were acquired by the Military Academy in 1970. They appear to be the work of one cartographer, yet only one map (Number 67) was signed. It bears the name "DuBourg", undoubtedly Baron Cromot du Bourg, aide to Rochambeau, whose "Diary of a French Officer, 1781" was translated into English and published in 1880 by the Magazine of American History. The maps accompanying this translation were part of the manuscript and closely resemble those in the *Atlas de la Guerre de l'Amerique*.

We wish to express our thanks to those persons whose efforts contributed significantly to this publication: Mrs. Jeannie Ruth Murphy, our diligent and patient typist, Colonel Merle G. Sheffield and Lieutenant Colonel Charles E. Miller for assistance with the West Point maps and sketches, Miss Irene Feith, Miss Peggy Root, Sergeant Major Frank X. Sammis, Sergeant James G. Brown, for their competent assistance, and lastly our spouses for their patient encouragement.
